*Modified test based on AS2001.2.10 that averages the results of five Ripstop® peaks

End Use Recommendations:

08 291 and 08 295 are both designed for use in lightweight horse rugs and other livestock covers for the summer months. The different fabric styles offer similar levels of good strength and abrasion resistance. The plain and coloured checks provide the fabric with excellent Ripstop® strength to prevent it from tearing – particularly effective for stopping rips from barbed wire fences.

Care Instructions:

Covers constructed from these styles should be hosed regularly and allowed to line dry to prevent the build-up of surface soil. Whilst the polyester fabric itself is rot resistant and impervious to fungal attack, mildew will form on its surface if left in a soiled, damp condition.

Ensure that rugs are thoroughly dry before stowing away in a cool dry location. If a rug is packed up wet, it should be opened up to dry as soon as possible to prevent mildew growth on its surface.

The specifications contained herein are based on a typical production sample, and are accurate at the time of printing.
 Bradmill Outdoor Fabrics reserves the right to change the specification without notice.
